

# Firm Information

## Plan Smart

Facility Programming and Consulting was founded in 1992 with one mission: to respond to architectural project definition and planning needs. We seek out and define a problem *before* attempting to solve it—and that investment pays huge dividends over the life of an architectural project.

Successful projects are designed through a thoughtful analysis of the actual client need—and we provide quality architectural programming as the key to creating functional buildings. We don't design buildings—instead we build a strong conceptual foundation on which to anchor design. Through our focus and dedication to this practice, we have proven expertise in pre-project planning for facilities world-wide.

## Translator, conductor and peacemaker

In our programming process, we combine the skills of translator, conductor and peacemaker. We're experts at programming because we know how to lead people—and we know that just talking about good ideas isn't enough. Our clients measure success in many ways, but no matter what the goals, we are driven to ensure they are attained.

Let us help you plan smart and create the perfect solution.

Analyze needs.

Utilize space.

Build consensus.

Save money.

*We offer a full range of services that precede the design process to make it smoother, less expensive, and move it forward with clarity. Our services include:*

- Architectural Programming
- Master Planning
- Laboratory Planning and Design
- Strategic Facilities Planning
- Sustainable Design Criteria
- Project Definition
- Needs Assessment
- Space Utilization Analysis
- Site Planning Studies
- Economic Analysis
